

Project Title: Project CoreOps - 2024

Project Overview: This year, Project CoreOps is focused on scaling the automation initiatives from last year. However, challenges have emerged that need addressing to ensure continued success.

Current Status:

- **Automation Progress:** Currently, only 60% of workflows have been automated, lagging behind the initial target.
- **Budget Concerns:** The project is currently 15% over budget due to increased resource requirements and technology costs.

Key Issues:

- **Resource Constraints:** Ongoing difficulties in hiring skilled professionals have slowed down progress.
- **Infrastructure Challenges:** The current infrastructure is not adequate to support the required scale, leading to delays.

Action Items: To get back on track, the project team needs to:

1. Reassess the budget and seek additional funding.
2. Expedite the recruitment process to fill critical roles.
3. Evaluate infrastructure needs and invest in necessary upgrades.
